I am a subscriber to XM radio and would like to voice my support of satellite radio. I am appalled by the petition of the National Association of Broadcasters (04-160) to limit the local content of satellite radio. XM radio provides valuable programming that I fully appreciate and pay for. Being a truck driver it makes it easier and safer for me to get the information I need without searching on the conventional radio. This is a matter that should be settled in the free market. I would urge the FCC to reject the NAB petition and allow the new technology of satellite radio to grow.

Sincerely,
Adam S Keach
